Albumin	3.4	g/dL	3.5 – 5.0	Low

Haematologist's Comment

CRITICAL VALUES PRESENT. Markedly elevated WBC count of 95,000/μL with blast percentage of 72% is highly suggestive of Acute Myeloid Leukemia (AML). Severe anaemia (Hb 7.8 g/dL) and thrombocytopenia (Platelets 42,000/μL) consistent with bone marrow infiltration. Elevated LDH (850 U/L) and uric acid (8.2 mg/dL) indicate high tumour burden. Urgent haematology referral recommended. Bone marrow biopsy and cytogenetic studies advised.
